

POST DRIVERS/COMPACTION PLATES

Post Driver and Compaction Plate attachments are compatible with a wide range of excavators & backhoe loaders from 1.5 – 30 Ton and are ideal for a range of landscaping, forestry and building jobs including driving wooden and concrete posts for fences, photovoltaic systems, barriers and agricultural projects. Our excavator mounted post drivers are essential for work on uneven ground where getting the required force at the desired angle is problematic. Other benefits of having a post driver include being able to use one machine to complete the whole job, from picking up, positioning and driving the post, without the need to leave the machine. The vibration technology used by our drivers does not compromise the integrity of the post material like other traditional/hammer style drivers. The standard set up comes with the bottom vibration plate with cup customised to the size and material required to drive and with the post clamp attachment.

Optional

- Rubber clamp pads
- Fork for wood/cement pole transport
- Hydraulic pincer (for use with Larssen sheet etc)
- Standard or quick hitch mounting brackets

Our compaction plates use the same main body as our post drivers but come supplied with a base compaction plate.
